# CREST Mathematics Olympiad (CMO) Worksheet for

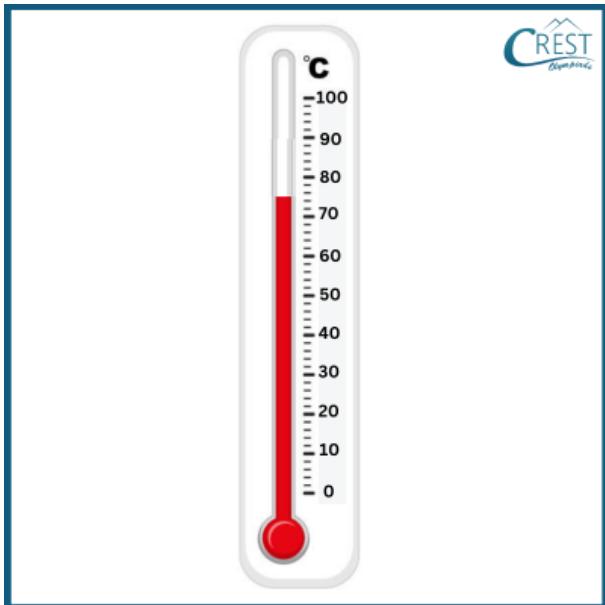

## Class 3

**Topic**  
**Temperature**

# Worksheet on Temperature

1. What is the temperature shown on the thermometer in °F?

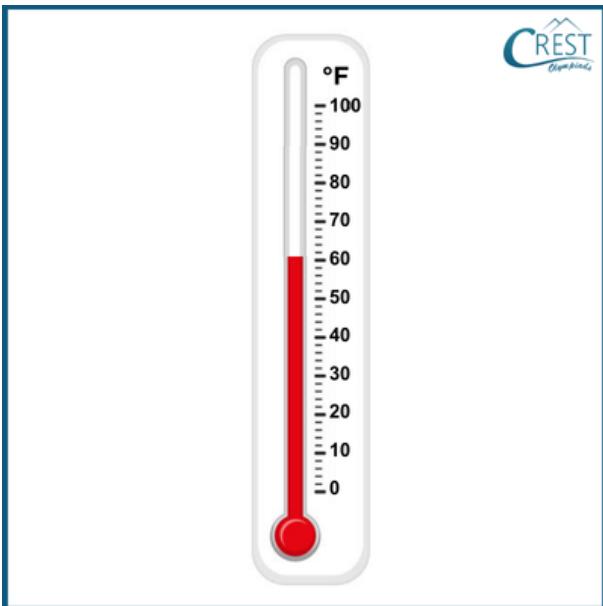

- a. 70 °F
- b. 72 °F
- c. 74 °F
- d. 78 °F

2. What is the sum of temperatures in the afternoon and at night if the temperature in the afternoon is 48°C and the temperature at night is 27°C?

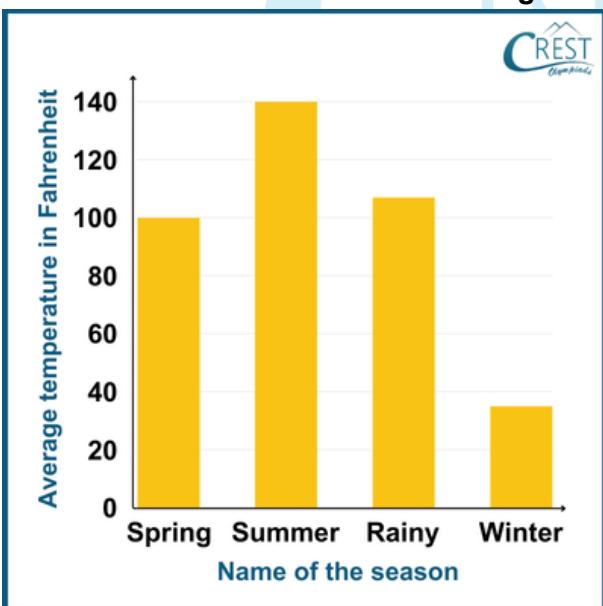

- a. 65°C
- b. 75°C
- c. 95°C
- d. 105°C

3. The level of mercury is used to indicate the temperature in degrees Celsius ( $^{\circ}\text{C}$ ). What is the difference between the marked temperature on a thermometer and the boiling point of water in Celsius?

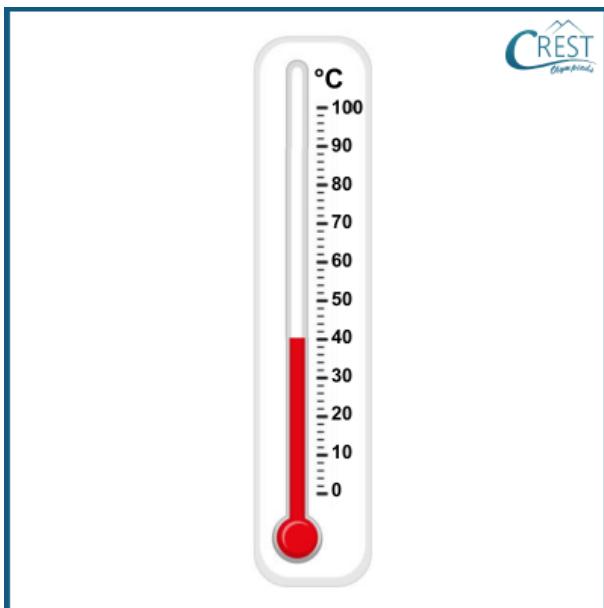

- a.  $40\ ^{\circ}\text{C}$
  - b.  $60\ ^{\circ}\text{C}$
  - c.  $80\ ^{\circ}\text{C}$
  - d.  $100\ ^{\circ}\text{C}$
4. What is the difference between average temperatures in winter and summer?

- a.  $75\ ^{\circ}\text{C}$
- b.  $75\ ^{\circ}\text{F}$
- c.  $105\ ^{\circ}\text{C}$
- d.  $105\ ^{\circ}\text{F}$

5. The thermometer is giving you an incorrect temperature reading. It is showing you a temperature that is  $13^{\circ}\text{C}$  higher than the correct temperature. What is the correct temperature?

- a.  $53^{\circ}\text{C}$
- b.  $47^{\circ}\text{C}$
- c.  $37^{\circ}\text{C}$
- d.  $27^{\circ}\text{C}$

1. c -  $74^{\circ}\text{F}$

**Explanation:** The marking is above  $70^{\circ}\text{F}$ .

1 marking indicates  $2^{\circ}\text{F}$ .

So, there are 2 markings above  $70^{\circ}\text{F}$  which is  $4^{\circ}\text{F}$ .

$$\begin{aligned}\text{Hence, temperature on the thermometer} &= 70^{\circ}\text{F} + 4^{\circ}\text{F} \\ &= 74^{\circ}\text{F}\end{aligned}$$

2. b -  $75^{\circ}\text{C}$

**Explanation:** The sum of temperature in the afternoon and at night =  $48^{\circ}\text{C} + 27^{\circ}\text{C}$   
=  $75^{\circ}\text{C}$

3. a -  $40^{\circ}\text{C}$

**Explanation:** Marked temperature on a thermometer =  $60^{\circ}\text{C}$

Temperature at which water boils =  $100^{\circ}\text{C}$

Difference between the marked temperature on a thermometer and the boiling point of water in Celsius =  $100^{\circ}\text{C} - 60^{\circ}\text{C} = 40^{\circ}\text{C}$

4. d - 105°F

**Explanation:** Temperatures in winter = 35°F

Temperatures in summer = 140°F

$$\begin{aligned}\text{Difference between temperatures in winter and summer} &= 140^{\circ}\text{F} - 35^{\circ}\text{F} \\ &= 105^{\circ}\text{F}\end{aligned}$$

5. d - 27°C

**Explanation:** Incorrect temperature reading = 40°C

The incorrect temperature is 13°C higher than the correct temperature.

Thus, the correct temperature is 13°C lower than the incorrect temperature.

$$\begin{aligned}\text{Correct temperature reading} &= 40^{\circ}\text{C} - 13^{\circ}\text{C} \\ &= 27^{\circ}\text{C}\end{aligned}$$
