# Worksheet on Surface, Area and Volume

1. Based on the statement, which of the conclusions is valid?

**Statement:** The inner diameter of a circular well is 4 m and its depth is 17.5 m. The cost of plastering this curved surface area is \$8.35 per  $\text{m}^2$ .

**Conclusion A:** The total cost of plastering is  $484.5\pi$ .

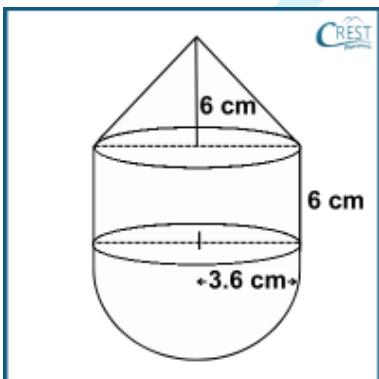

**Conclusion B:** The total cost of plastering is  $684.5\pi$ .

- a. Only A
- b. Only B
- c. Both A and B
- d. Neither A nor B

2. What is the volume of the cone that has the same radius and height as that of the cylinder if the volume of a cylinder is  $555 \text{ cm}^3$ ?

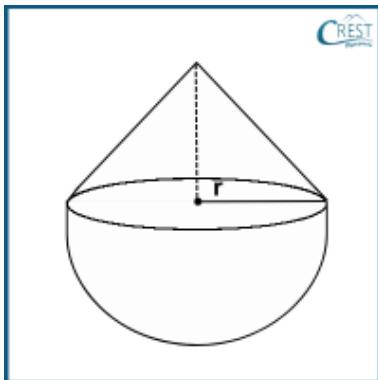

- a.  $165 \text{ cm}^3$
- b.  $185 \text{ cm}^3$
- c.  $205 \text{ cm}^3$
- d.  $225 \text{ cm}^3$

3. What is the volume of the given figure?

- a.  $(12.96 \times 6.4\pi) \text{ cm}^3$
- b.  $(12.96 \times 8.4\pi) \text{ cm}^3$
- c.  $(12.96 \times 10.4\pi) \text{ cm}^3$
- d.  $(12.96 \times 12.4\pi) \text{ cm}^3$

4. What is the total surface area of the given figure?

- a.  $\sqrt{2}(1 - \sqrt{2})\pi r^2 \text{ cm}^2$   
 b.  $\sqrt{2}(1 + \sqrt{2})\pi r^2 \text{ cm}^2$   
 c.  $\sqrt{2}(2 - \sqrt{2})\pi r^2 \text{ cm}^2$   
 d.  $\sqrt{2}(2 + \sqrt{2})\pi r^2 \text{ cm}^2$
5. The diameter of Mars is approximately one-fourth of the diameter of Mercury. What fraction of the volume of Mercury is the volume of Mars?
- a. 1/8  
 b. 1/16  
 c. 1/32  
 d. 1/64

## Answer Key

1. d - Neither A nor B

**Explanation:** Radius ( $r$ ) =  $\frac{1}{2} \times 4 \text{ m} = 2 \text{ m}$

Depth ( $h$ ) = 12.5 m

Inner curved surface area of the well (CYLINDER) =  $2\pi rh$

$$= 2 \times \pi \times 2 \times 17.5$$

$$= 70\pi \text{ m}^2$$

Total cost of plastering = Area to be plastered  $\times$  cost of plastering per  $\text{m}^2$

$$= 70\pi \times \$8.35$$

$$= \$584.5\pi$$

2. b -  $185 \text{ cm}^3$

**Explanation:** Volume of cone =  $\frac{1}{3} \pi r^2 h = \frac{1}{3} \times \text{Volume of Cylinder} = ? \times 555 \text{ cm}^3 = 185 \text{ cm}^3$

3. c -  $(12.96 \times 10.4\pi) \text{ cm}^3$

**Explanation:** Common radius ( $r$ ) = 3.6 cm

Height ( $h$ ) = 6 cm

Total volume of the figure = Volume of cone + Volume of cylinder + Volume of hemisphere

$$= \frac{1}{3} \pi r^2 h + \pi r^2 h + \frac{2}{3} \pi r^3$$

$$= \pi r^2 (\frac{1}{3} h + h + \frac{2}{3} r)$$

$$= \pi (3.6)^2 (\frac{1}{3} \times 6 + 6 + \frac{2}{3} \times 3.6)$$

$$= \pi \times 12.96 (2 + 6 + 2.4)$$

$$= \pi \times 12.96 \times (2 + 6 + 2.4)$$

$$= \pi \times 12.96 \times 10.4$$

$$= \pi \times 12.96 \times 10.4$$

$$= (12.96 \times 10.4\pi) \text{ cm}^3$$

4. b -  $\sqrt{2}(1 + \sqrt{2})\pi r^2$  cm<sup>2</sup>

**Explanation:** Height (h) of the cone = Radius of the cone = r

$$\begin{aligned}\text{Slant height (l) of the cone} &= \sqrt{(r^2 + h^2)} \\ &= \sqrt{(r^2 + r^2)} \\ &= \sqrt{2r^2} \\ &= r\sqrt{2}\end{aligned}$$

$$\begin{aligned}\text{Required surface area} &= \text{Curved surface area of hemisphere} + \text{Curved surface area of cone} \\ &= 2\pi r^2 + \pi rl \\ &= 2\pi r^2 + \pi r \times r\sqrt{2} \\ &= 2\pi r^2 + \pi r^2\sqrt{2} \\ &= \sqrt{2} \times \sqrt{2}\pi r^2 + \sqrt{2}\pi r^2 \\ &= \sqrt{2}\pi r^2 (\sqrt{2} + 1) \\ &= \sqrt{2}(1 + \sqrt{2})\pi r^2 \text{ cm}^2\end{aligned}$$

5. d - 1/64

**Explanation:**

Diameter of Mars is approximately one-fourth of the diameter of Mercury.

$$\Rightarrow d_{\text{mar}} = \frac{1}{4} d_{\text{mer}}$$

$$\begin{aligned}\frac{\text{Volume of Mars}}{\text{Volume of Mercury}} &= \frac{\frac{4}{3}\pi r^3}{\frac{4}{3}\pi r^3} \frac{\text{mar}}{\text{mer}} \\ &= \frac{r^3}{r^3} \frac{\text{mar}}{\text{mer}} \\ &= \frac{\left(\frac{d^3}{4} \text{ mar}\right)}{\left(\frac{d^3}{4} \text{ mer}\right)^2} \\ &= \frac{\left(\frac{d}{4} \text{ mar}\right)^3}{\left(\frac{d^3}{4} \text{ mer}\right)^3} \\ &= \frac{\left(\frac{1}{4} \frac{d}{4} \text{ mer}\right)^3}{\left(\frac{d^3}{4} \text{ mer}\right)^3} \\ &= \left(\frac{1}{4}\right)^3 \\ &= \frac{1}{64}\end{aligned}$$
